

# Female At-Home Testing Pinpoints Your Exact Fertility Window

## ARC Fertility proudly offers Mira:

The **first FDA- and CE-registered fertility hormone real-time tracking platform**, designed to provide women with the most accurate at-home testing experience.

Mira is revolutionizing female fertility testing by offering **instantaneous, quantitative hormone measurements** to help women determine their exact fertile window. Unlike traditional ovulation predictor kits that simply show a hard-to-read dark line indicating a hormone surge, **Mira delivers 99% accuracy**, providing personalized insights based on unique hormone curves, allowing women to track their cycles with precision.

Mira expands ARC Fertility's portfolio of family-forming and reproductive healthcare services, providing women and employers with affordable, accurate and effective fertility solutions.

## ARC Member Discount

ARC members receive a **20% discount** on Mira Kits and Mira Test Wands, making it an affordable way to take control of your fertility journey from home.

### How It Works:

- 1. Collect a Sample:** Use Mira's test wands to collect a urine sample.
- 2. Analyze:** The palm-sized Mira Analyzer reads the test wand and sends the data to the Mira app.
- 3. Sync & Predict:** Data is automatically synced to the Mira app, where AI-powered algorithms analyze the hormone concentrations and predict the fertile window with unmatched accuracy.

## Key Benefits of Mira At-Home Testing:

- **Track Multiple Hormones:** Measures key fertility hormones such as LH (luteinizing hormone), E3G (estrogen metabolites), PdG (progesterone metabolites) and hCG (for pregnancy detection).
- **Accuracy You Can Trust:** Over 99% accuracy in clinical trials, offering lab-quality results at home.
- **Personalized Insights:** AI-powered app provides detailed hormone curves and cycle predictions, personalized to each woman's unique health patterns.
- **Future-Proof:** Mira's platform continues to expand, with future capabilities for tracking ovarian reserve, detecting menopause and monitoring fetal health.
