

## University Hospitals Fertility Center

The new University Hospitals Fertility Center offers hope, experience and results for those dreaming of starting a family but having difficulty conceiving.

James Goldfarb, MD, a nationally renowned fertility pioneer who was responsible for Ohio's first in vitro fertilization (IVF) birth in 1983, the world's first IVF surrogate birth in 1986, and Ohio's first birth from pre-implantation genetic diagnosis (PGD) in 2004, serves as medical director of the UH Fertility Center.

Equipped with the most advanced technology currently available anywhere, the UH Fertility Center offers comprehensive, individualized care in a welcoming, patient-friendly environment. Our team of specialists will evaluate patients to identify the cause of infertility, and recommend the most effective and affordable treatment options.

Patients at the center also have access to the Partnership for Families program of University Hospitals, a unique philanthropic organization that provides financial assistance to qualified couples or women experiencing infertility.

The UH Fertility Center is staffed by nationally recognized fertility specialists, working out of multiple community locations, including:
